

Act 2 Guide Completed in a Group

Name:

Date:

33%

of total food calories consumed is consumed in **restaurants**
(Health Policy Brief, 2015).

Because of the obesity epidemic in the United States the Affordable Care Act (ACA) has included a provision that requires that all restaurants with 20 or more locations post calorie information about all major items on their menu. This must be implemented by December 2016.

Questions:

1. Will posting calorie information keep people from eating too much?
2. Would posting the amount of exercise needed to burn off the calories affect people's choices?

You get to find out!

Project: Take a survey of students to see if their choice of food is effected by having calories, exercise, or nothing next to each menu item.

Reminders:

- Please refer to rubric during planning phase
- During research please utilize the pinterest board created for this project:
